11. Overview of the entity's material responsible business conduct issues.

Please indicate material responsible business conduct and sustainability issues pertaining to environmental and social matters that present a risk or an opportunity to your business, rationale for identifying the same, approach to adapt or mitigate the risk along-with its financial implications, as per the following format

S. No.	Material issue identified	Risk or opportunity (R/O)	Rationale for identifying the risk/ opportunity	In case of risk, approach to adapt or mitigate	Financial implications of the risk or opportunity (positive or negative implications)
1	Energy Management	Risk	To combat climate change, corporates such as Minda Corporation have to lead decarbonization efforts through a reduction in energy intensity, dependency on fossil fuels, and investments in renewable energy. To effectuate a low-carbon transition, MCL has been working towards creating effective energy management through conservation and lowering fossil-fuel based energy consumption. Globally, investors and stakeholders are consistently looking to foster sustainable partnerships and not investing in such mechanisms may pose potential risks.	Further integration of energy management within our corporate ESG strategy is a must and we are working towards lowering our carbon footprint and enabling efficient energy use. MCL has invested in renewable energy i.e., solar power, and will continue to look at ways to reduce dependence on fossil fuels	Negative
2	Materials Efficiency	Opportunity	Sustainable sourcing and assessing impacts – environmental and social – of products and materials is a must in today's global milieu. The world is moving towards identifying ways and means to reduce the usage of materials through measures of circularity and reuse. MCL needs to leverage this opportunity and work towards materials efficiency.	Materials efficiency poses an opportunity for MCL to reduce its spending on a multitude of products which would reduce if materials are reused efficiently	Positive
3	Waste Management	Risk	Waste generated through MCL's operations presents/requires transformation to reuse and reclaim to enable circularity. Poor waste management practices in terms of ineffective disposal methods cause air pollution, water pollution, and land degradation. This further contaminates groundwater levels, transmitting disease. MCL, currently only manages its waste by an authorized waste vendor for all hazardous and non-hazardous waste types.	It is imperative that MCL identifies ways to reduce waste to landfill, and waste incineration, among other non-conductive ways to protect our planet. MCL is looking towards measures of circularity to reclaim and reuse the wastes produced, and will be investing in efficient technologies, reduce use of hazardous waste, and wastage of materials.	Negative

S. No.	Material issue identified	Risk or opportunity (R/O)	Rationale for identifying the risk/ opportunity	In case of risk, approach to adapt or mitigate	Financial implications of the risk or opportunity (positive or negative implications)
4	Product Quality & Safety	Risk and Opportunity	Product quality and safety is important for manufacturing enterprises such as MCL. We recognize that failure to meet quality and safety standards can lead to negative consequences including reduced positive customer experiences, loss of supply chains, value chains and might result in legal actions or fines leading to significant financial losses for the company.	MCL consistently ensures that the product quality and safety of all its products is at par with global best-practices. However, MCL will be investing in management systems to ensure product safety, monitoring non-compliances and ensuring best products and safe use along with top-quality. Investing in these measures will increase customer trust, and build a robust value chain.	Positive and Negative
5	Occupational Health & Safety	Risk	MCL believes that our employees and workers are our most valuable assets. Their health and safety is paramount and hence, we have created a robust OHS system in place to ensure risks are identified timely, mitigated and provides a safe working environment for all. This has created high retention rates at our organization, across our plants.	MCL conducts regular internal and external safety audits and has committees in place to ensure safety and health of workers and employees in all its plants. MCL also has appropriate and requisite safety certifications	Negative
6	Business Ethics	Risk	Business ethics are a cornerstone of ensuring transparent and sustainable corporate governance framework. In this context, MCL has an effective business ethics environment across our plants. We uphold policies and good-governance measures in high regard and believe it is essential to ensuring an effective and top-down approach to ESG. Our ESG strategies are integrated in our governance and policy frameworks which supports us in creating a conducive and well-integrated governance structure, upholding business ethics. We regularly monitor the changing regulatory landscape in the country and all the laws and	MCL has a robust and comprehensive internal governance mechanism. With policies such as Whistleblower Policy, Prevention of Insider Trading, Related Party Transactions and Grievance Redressal across stakeholders, among others, MCL ensures an ethical work environment. The MCL Code of Conduct for employees and board of directors upholds transparency and business ethics.	Negative

S. No.	Material issue identified	Risk or opportunity (R/O)	Rationale for identifying the risk/ opportunity	In case of risk, approach to adapt or mitigate	Financial implications of the risk or opportunity (positive or negative implications)
			<p>changing regulatory landscape in the country and all the laws and mandates (union and federal) which have the potential, or do impact us positively and negatively. It is through these systems that we able to comply and create good governance measures.</p>		
7	Supply Chain Management	Risk	<p>Supply chain management affects product and service quality, delivery, costs, customer experience, and ultimately, profitability. In the globalized world, supply chains are not only the backbone of manufacturing companies like ours, but also where maximum disruptions take place. Supply chains have faced disruptions at the hands of the pandemic, the Russia-Ukraine conflict and with the evolving regulatory landscape with CBAM, and others, trade and supply chains are consistently getting disrupted. Physical risks posed by climate change are effecting raw material sourcing negatively and thus, MCL aims to create a robust and effective management of supply chain so as to not let its supply chain effect business continuity.</p>	<p>To ensure business continuity despite supply chain disruptions, MCL is working towards creating agile and resilient supply chain management systems. This involves identifying critical suppliers as Tier 1, 2, and Tier 3. This would help identify where most of our raw material comes from, and the value chain our products are sent to. Not managing the supply chain will create loss of business, and reduced revenues. We are looking to conduct a vulnerability assessment as well, to ensure that supply chain preparedness is upheld to enable and ensure business continuity even if disruptions occur.</p>	Negative
